To Whom It May Concern:

ARMTRAC GROUND PREPARATION MACHINES

This letter serves as a reference for the Armtrac machines supplied to G4S Ordnance Management (G4SOM) in support of our clearance operations in Southern Sudan.

Armtrac initially supplied G4SOM with the Armtrac 100 tractor based machine in 2006 to support our survey and clearance teams. In 2008, we purchased the Armtrac 400 track based machine with a tiller system. Additionally, we purchased flail attachments and latterly, tiller attachments for both machines. We also purchased complete spares and consumable packages in order to keep the machines operational.

Sudan is an extremely demanding environment for anything mechanical but by and large, the machines have performed as expected and we have received support from the Armtrac offices in the UK as required. As we enter our fifth year of continual operations, our machines continue to provide much relied on support in our efforts to clear mines and open up infrastructure in Sudan.

As is to be expected in the type of operations that we conduct, we have had anti tank mine strikes. Repairs have been conducted quickly and efficiently and in each case, there has been minimal damage to front end attachments and none at all to the machines themselves.

Do please contact me should you require any further information

Regards

DP McDonnell
