

The **Armtrac 75T-230** is Armtrac's middle of the range demining machine. Smaller than the Armtrac 400, the 75T still maintains all of the functionality of its bigger brother for all demining activities.

With its hydraulically operated 2.2 meter Tiller Rotor, the 75T is capable of clearing approximately 1,700 square meters per hour, to a verified (**CROMAC tested*) depth of 35cm. A Flail is also available.

The 75T is designed to destroy & withstand 8.8 kg Anti-Tank mines.

The 75T is fully remote controlled

up to 1000 meters LOS allowing the Operator to remain at a safe distance while still maintaining 100% control of all the machine's functions, or alternatively if fitted with its fully armoured, sound proofed & air-conditioned cabin (which can withstand NATO Ball at point blank range), an Operator can maintain a detailed "bird's eye" view of demining operations in complete **comfort & safety**. The cabin maintains the same design as the Armtrac 400; however it can tilt forward to allow easy access to the engine, hydraulics & electrics for ease of maintenance.

A variety of toolkits are available for clearing landmines and UXO. As well as a tiller and flail, the Armtrac Mine Comb can extract buried mines and UXO down to 50 cms. When the Armtrac Sifter is fitted to the rear of the machine, this extracts items & potentially missed ordnance to 50 cms which provides a comprehensive quality assurance tool when used together with a front mounted tiller or flail.

By utilising industry standard quick hitch systems, numerous construction tool attachments can be exchanged for the demining toolkits and fitted onto the 3 point linkage at the front. The Robotic Arm is also fitted onto the 3 point linkage which provides a very versatile tool with a standard scrape bucket or a grapple attached for extracting UXO which are difficult to access.

The quick hitch system will accommodate any standard construction tool such as buckets, dozer blades, fork lift tines or power grab, making the Armtrac 75T-230 an extremely versatile & useful machine in and out of high threat areas. The Armtrac 75T a powerful workhorse for a wide range of levelling, loading, lifting and construction roles as well as clearing mines, IEDs and UXO. This gives it a "second life" after its clearance role.

The **Armtrac 75T-230** is a versatile and flexible multi-role machine with maintenance reduced to a minimum with its more reliable hydraulically operated tools.
